**All-Safe will make your pool a safer place**

**All-Safe<sup>®</sup>**

Pool Safety Net

The **All-Safe®** product is distributed nationally and internationally through a network of independent dealers. Quality control and attention to detail is second to none. All-Safe® pool netting has been tested by independent testing laboratories to certify compliance with nationally recognized ASTM standards, as well as various state and local jurisdictions.

**A+**

**A**

All-Safe® is the preferred choice for removable pool nets with over 25 years of expert experience in swimming pool safety. The manufacturer continues to maintain a 5 star rating on Yelp!, Google+, Facebook, and Houzz. All-Safe® also has an A+ rating with the BBB, as well as a perfect "A" rating on Angie's List.

All-Safe® was recognized by the United States Small Business Administration as "Business of the Year" and has been voted "Best of Houzz" on multiple times.

## TITAN TOOL

ALL-SAFE EXCLUSIVE COMPONENT ✓

All-Safe's exclusive Titan Tool™ — This is the best tool in the industry used to apply the tension to the CTS (Central Tensioning System). The Titan Tool is stable and has a natural easy motion when applying and removing tension from the CTS line, making it simple and easy for all pool owners to apply and remove the tension to your pool safety net.

## ROUND LOOP TOOL

ALL-SAFE EXCLUSIVE COMPONENT ✓

All-Safe's exclusive Round Loop Tool™ allows us to install nets on spas and smaller water features without a CTS, giving it a cleaner look and eliminates a step to take the net off and on. The Round Loop Tool also solves lock-off, which occurs when features or the shape of the pool will not release tension in specific areas. Other companies will simply make you "muscle it off". At All-Safe we will install threaded anchors and a Round Loop tool so your pool safety net is much easier to remove and replace.

## RATCHET TOOL

All-Safe's Ratchet Tool™ is similar to what most of our competitors use. Because of the breakthrough with All-Safe's exclusive Titan Tool, the Ratchet is typically used in situations when a customer is looking for a less expensive option, or a net will not be taken off and on very often, or it is a small spa or water feature, or on some grass-surrounded pools.

## REINFORCED ROLLER

ALL-SAFE EXCLUSIVE COMPONENT ✓

One of the long standing issues with the industry standard PVC roller is binding caused by friction, which makes it difficult for the user to roll the net off and on the pool. To solve this issue All-Safe uses furniture grade PVC and inserts a steel reinforcement, reducing the friction and eliminating the binding issue. Furniture grade PVC is ultra-strong, UV-resistant, impact resistant and non-toxic, with an unmarked glossy surface finish.

## CENTRAL TENSIONING SYSTEM (CTS)

The CTS is the group of pulleys in the middle of a safety net that applies or takes the tension off the net and allows you to remove the net with relative ease. All-Safe's pulleys are composed of glass filled nylon with stainless steel pins, and our CTS cord is made out of braided polyester. This combination of material prevents binding, is more abrasion resistant, and has better UV protection.

ALL-SAFE OFFERS THE LARGEST SELECTION OF POOL NET OPTIONS IN THE INDUSTRY

5MM NET

All-Safe® is one of, if not the only company to offer a 5mm net. Other companies typically use 4mm or 3.5mm. 5mm net has **56% more high density**, virgin polyethylene material and is **31% stronger** resulting in less deflection than our competitors 4mm net. All-Safe's nets are machine tied, heat stented and All-Safe® is the only company to offer 4 color options – blue, black, dark brown, and tan. All-Safe® netting contains **33% more UV additive** than most competitors which results in a longer lasting net. Simply put, All-Safe's 5mm net is stronger, has more color options and will last much longer than a typical competitor's net.

All-Safe® has professionally engineered the strongest and most durable net, with the finest components, to make sure your net is the safest and most aesthetically pleasing pool safety net in the industry. The reputation of the All-Safe® product is second to none, proven by online reviews, client testimonials and referrals from customers and pool industry professionals. All-Safe® has manufactured and installed pool safety nets for over 25 years and takes pride in using the absolute best practices in the industry. In the Greater Los Angeles area, All-Safe® installs thousands of nets each year, factory direct. This creates a manufacturing environment of constant research and development of the product and installation methods, which are shared with the independent dealer network. All-Safe® pool safety nets will make your pool a safer place.

## PUTTING THE NET ON

STEP 1

Walk the net off the roller and across the pool water.

STEP 2

Attach clips to the anchors in the deck.

STEP 3

Tighten CTS with your Titan Tool or Ratchet.

See our on-line instructional video at  
[www.allsafepool.com/videos](http://www.allsafepool.com/videos)

Please Note: Every pool and spa is different. Your pool or spa net may require more or less steps to remove and put back on. Please ask your dealer about the specifics regarding your pool or spa. You will also receive a full demonstration at the end of your installation.

Reverse the above steps to take your net off

## DESIGN OPTIONS AND FEATURES

Anchor

Anchor With Clip

Anchor

Anchor With Clip

### Brass Key Hole Anchor:

Keyhole anchors are the standard anchors used for pools. They are always flush with the deck and about the size of a penny.

### Brass Threaded Anchor:

Threaded anchors are used with the Round Loop Tool to apply or remove tension on spas or to solve lock-off issues. Although they do stick up when in use, they can be screwed down to flush when not in use.

Anchor

Anchor With Clip

Anchor

Anchor With Clip

### Composite Anchor:

Composite anchors are used when our net will be anchored to more sensitive material such as tile. We also use composite anchors when a customer would like to minimize the hole size that is drilled into the deck.

### Stainless Steel Wall Anchor:

Wall anchors are used when we must anchor to a vertical surface or to close gaps as the net goes up and down as the elevation changes.

Custom-Made Leaf Cover

Your All-Safe® net will provide safety, however it will not keep leaves and other debris out of your pool or spa. All-Safe's Custom Leaf Covers are made from a tightly knitted polyethylene material that allows rainwater to easily pass through, while filtering out leaves and debris. They are custom-made to fit the size and shape of your pool and have a clean, "finished" look. If you would like to find out how to add a custom leaf cover to your safety net please ask your local dealer for more information.
