

# The Cover Company

The Ultimate in Safety, Strength, and Peace of Mind

The Cover Company has been manufacturing the highest quality covers available for 33 years. We are a family run business that prides itself on quality manufacturing, products, and exceptional customer service.

We carry an extensive line of Custom Outdoor Covers, but our line of Safety Covers are in a class by themselves. Simply put, they are the best Safety Covers made and we're sure you will agree. What makes a COVERLON Safety Cover so much better? Heavy duty brass anchors, stainless steel springs, brass caps, custom fabricated polypropylene fabrics, double webbing (full front and back), triple stitched with high strength thread and both Box and X-Stitches at all joints. This all adds up to the finest cover available. Our safety covers are manufactured to exceed the American Society for Testing Materials (ASTM) swimming pool safety cover standards.

YEARS

## Safe

The safety of your loved ones is at the forefront of every cover design and material selection.

## Strong

Double webbed, triple stitched and Tenara® reinforced, means the ultimate worry-free cover.

## Easy

No pool debris or standing water means opening your pool has never been easier.

# The Coverlon Difference

## All Covers Are Not Created Equal

### Brass Components

Corrosion and rust proof brass components are used throughout the cover. Threaded anchors conveniently recess flush with the pool deck when not in use. While others are using cheap aluminum caps to prevent fraying, we only use brass caps (painted black) to finish off each strap.

### Heavy Duty Springs

Our unique spring design is angled down at both the front and the back which prevents gaps between the cover and the pool deck, keeping wind and debris out. We finished off the spring with our signature E-Z Adjust locking device, which allows you to tighten the strap without a buckle - saving time and hassle.

### Triple Stitching

Great cover components are nothing without quality stitching. The dashed lines on the strapping (green, tan or blue) are decorative. The real strength is the black bonded thread, triple stitched into our cover. The applied finish to a bonded thread has excellent abrasion resistance improving durability, strength, and life span.

## Box and X-Stitch

Critical intersections receive both a Box and X-Stitch using UV resistant GORE® TENARA® thread, which remains flexible and strong during extreme hot or cold, will not absorb water, resists acid rain, salt water, and freezing.

## Webbing

Double webbing sets our covers apart from the rest. Instead of the webbing stopping 18 inches from the cover's edge we sew the webbing across the entire cover. A layer of webbing is triple stitched on both sides making the cover super strong and safe. The webbing is specially fabricated with a tensile strength of approximately 4,000 pounds per square inch.

## Classic Coverlon Mesh

Fabricated from a high-tech blend of lightweight, supple polypropylene that remains pliable and smooth year after year. The unique fabric is impervious to chlorine, mildew resistant, and has an extremely high tensile strength.

## Super Coverlon Mesh

The best mesh fabric available equals the ultimate pool cover. The tighter weave minimizes the sunlight that passes through the cover, therefore reducing spring time algae growth.

# Commercial Coverlon Mesh

This material's durability and safety features make it well suited for swim clubs, community pools and hotels. Commercial grade mesh fabric is recommended for commercial pools, but is also available for residential applications.

BLACK

# Super Coverlon Solid

This coated material is significantly stronger, has reduced weight and a tightly woven polyester rip stop core. The core limits the ripping and fraying if the material is punctured. Other covers available are made from laminated materials and do not offer these same advantages. An automatic pump or drain panel is required with this type of cover to prevent water accumulation on the surface.

## Unique Covers For Unique Spaces

A photograph of a swimming pool with a slide and a custom cover. The pool is surrounded by a fence and trees. The cover is a dark, grid-like material that fits the pool's shape perfectly. The slide is a light-colored, curved structure. The background shows a green lawn and trees with some autumn foliage.

From simple to complex, our computer aided design and advanced manufacturing techniques assure you of a properly designed cover that fits perfectly every time. Custom designs that include free-form shapes, steps, rock features, fountains, waterfalls, bridges and raised walls can all be produced with ease.
