

Make your pool a safer place

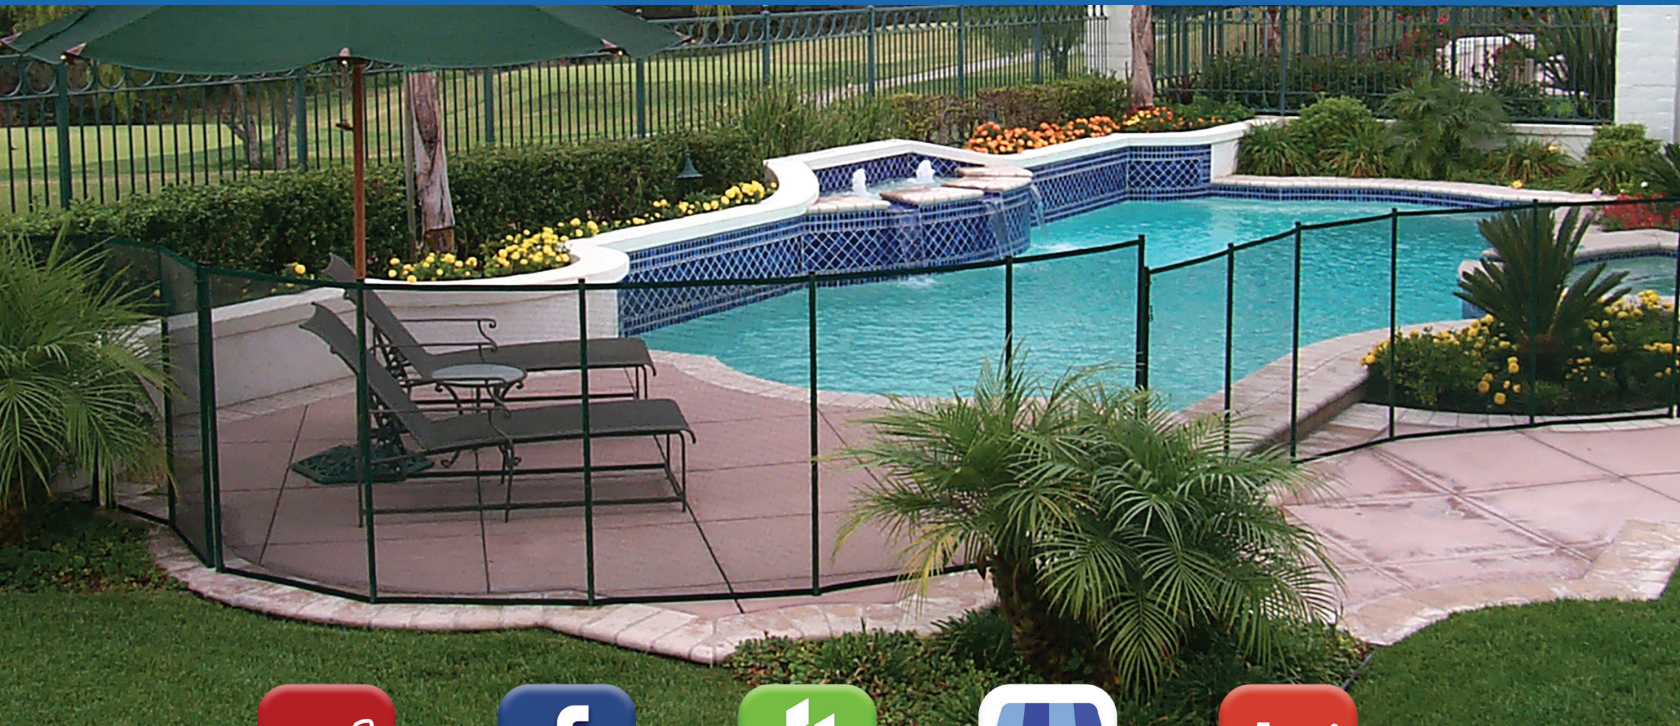

All-Safe®

Removable Pool Fencing

Safety, Durability & Peace Of Mind

The All-Safe® product is distributed nationally and internationally through a network of independently owned and operated resellers. Contact your local independent reseller to discuss your pool safety needs and obtain a quote.

All-Safe® pool fencing has been tested on multiple occasions by no less than three separate, independent testing laboratories to certify compliance with nationally recognized ASTM standards, as well as various state and local jurisdictions. Every state sets their own rules and regulations and your local jurisdiction may have requirements in addition to the state requirements, therefore, you should always consult with your local independent reseller prior to installation.

All-Safe® is the preferred choice for removable pool fences with over 30 years of expert experience in swimming pool safety. The manufacturer maintains stellar ratings across leading review platforms, including Yelp!, Google Business, Facebook, Houzz, and Angi. An unwavering dedication to customer satisfaction is reflected in the positive reviews and testimonials from satisfied clients. All-Safe® was recognized by the United States Small Business Administration as "Business of the Year" and has been voted "Best of Houzz" multiple times.

ALL-SAFE® OFFERS THE LARGEST SELECTION OF POOL FENCE OPTIONS IN THE INDUSTRY.

WARNING: Swimming pool safety barriers are not a substitute for competent adult supervision and cannot be a guarantee against drowning or other accidents. Never leave children unattended.

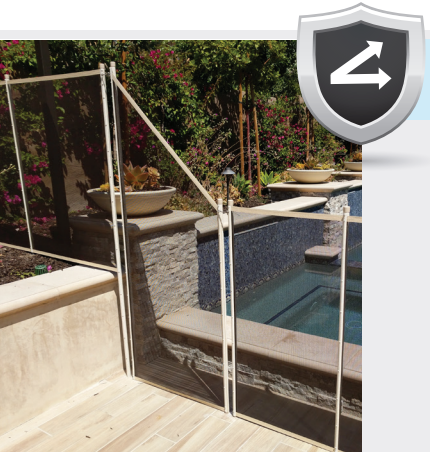

STABILITY ENGINEERED CORNER POSTS

ALL-SAFE® EXCLUSIVE COMPONENT ✓

Greater Strength, Fewer Wrinkles, More Versatile Design Options

Many companies use a 2 pole system when they need to create a turn that is 45 degrees or beyond in your fence. This may force other poles in your fence to bow awkwardly. All-Safe's exclusive Corner Posts are specifically engineered to make turns beyond **45 degrees**. The Corner Post allows your fence to **maintain tension** around a corner without the poles bowing while minimizing the number of holes in your deck.

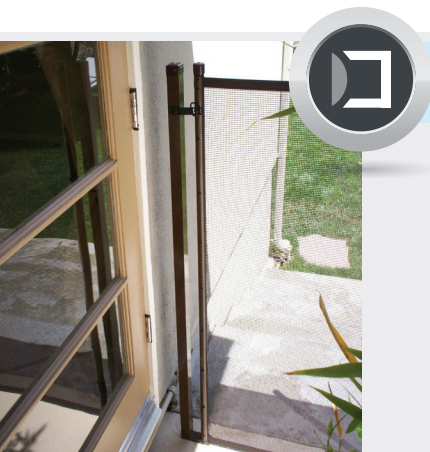

ANGLED RAISED PROTECTION PANELS

ALL-SAFE® EXCLUSIVE COMPONENT ✓

Improved Safety On Elevation Changes, Up to 8 Ft. High

A common safety concern, that needs to be addressed when installing the fence over a planter or retaining wall, is preventing a child from going on top of the wall or planter and swinging around the lower part of the fence. All-Safe® is the only manufacturer that offers Angled Raised Protection Panels and poles that go up to 8 feet to block these areas correctly. When Angled Raised Protection Panels are used, they will raise your fence to the proper height. All-Safe's Angled Raised Protection Panels also offer a softer, more attractive look while **securing the area better** than any other product in the pool fence industry.

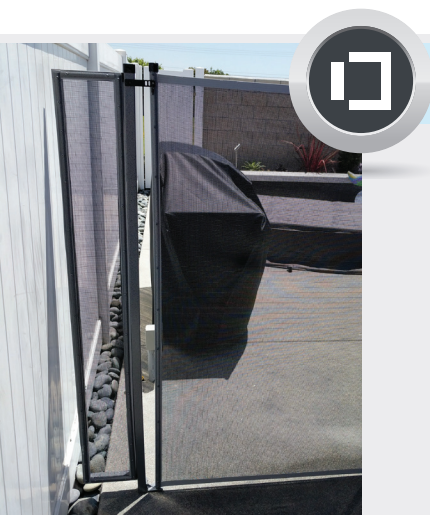

FREE STANDING TERMINATING POSTS

ALL-SAFE® EXCLUSIVE COMPONENT ✓

Self Supporting - No Holes in Your Wall

Mesh pool fences cannot simply stop anywhere. They need to attach to something strong enough to hold the tension of the entire fence line. When a mesh pool fence stops at a block wall or a solid/stable wall of the house, a normal wall attachment will work. However, when a fence stops at a glass, vinyl, wood or wrought iron fence or anywhere that a wall attachment cannot be used, a different solution is necessary. All-Safe® has engineered two poles to **securely terminate anywhere needed**. Rectangular Terminating Posts are used for concrete or pavers, and Round Terminating Posts are used in dirt or grass.

SIDE PANEL & PIGGYBACK GAP FILLERS

ALL-SAFE® EXCLUSIVE COMPONENT ✓

Fill Awkward Gaps That Allow Access Through The Fence

Side Panel and Piggybacks are another All Safe exclusive component developed to solve a frequent problem with removable mesh fences, how to fill awkward gaps left when a fence is installed. Mesh fences are tensioned systems, and what they are anchored to is vital for proper function and safety of the fence. When the fence is stopped/ended somewhere that does not have the proper space, room to drill or pour a concrete footing, a gap is created. The gap that is left can allow access for a small pet or child and would also make the installation not compliant with ASTM standards. Side panels and piggybacks help fill that gap. When a fence is stopped at a bbq with a ledge or a window with a decorative framing, side panels and piggybacks can be used to close the space that is left.

Pole Paint Process:

Creates strongest paint coat available in the industry

EASY USE AND STORAGE

All-Safe® removable pool fencing is installed by drilling small holes into your deck, a sleeve is inserted into the drilled hole and the pool fencing is inserted into those holes. When not in use, the mesh pool fence is fully removable and can be rolled up for easy storage and the exposed hole is covered with a Deck Plug.
